BEST BIAS DISCOVERY ($1,000 PRIZE ENTRY) — The Machine-Footprint Semantic Mirage & Invisible Emergency Infrastructure

Humane Intelligence Bias Bounty: Mapping Equity Challenge • Full 5-Region Audit Across All 9,794 Census Tracts & 19,169,786 Overture Footprints

Executive Thesis (Why the Automated 5-Metric Bias Scorecard Declares False Equity): Across all **9,794 scored census tracts** (19,169,786 Overture `2026-08-19.0` buildings), automated count-based metrics register near-zero building footprint gaps (`building_gap ≈ 0.004` , *"99.6% parity"*) across Tribal, wildfire-exposed, and unincorporated border tracts (Tribal vs. Non-Tribal raw building gap: `0.0075` vs. `0.0022`). By auditing Overture's nested `sources[].dataset` provenance, semantic typology (`subtype` / `class`), primary-vs-sibling emergency POI taxonomy, and highway route-shield tags, we uncover **three compounding bias mechanisms completely invisible to the automated API** that directly impair wildfire evacuation routing, volunteer fire/EMS dispatch, and flash-flood disaster relief.

1. Novelty Outside the Automated Scorecard (25% Rubric Weight)

The automated Bias Scorecard evaluates five fixed count/length ratios across seven single-axis strata. Our audit operates strictly *outside* that grid across three structural dimensions:

- **Mechanism I — Upstream Conflation & Semantic Attribute Desert (Data-Source Behavior):** Overture merges community-curated `OpenStreetMap` / `Esri` footprints with computer-vision `Microsoft ML Buildings` . While raw polygon counts equalize everywhere, **8,118,258 footprints (42.3%)** are single-source Microsoft ML roof blobs carrying **0% human verification, 100% `NULL` building `subtype` / `class` , and 100% `NULL` height/floor count**. Non-Tribal tracts enjoy **3.76x higher semantic building typing** (95% CI: `[3.31x, 4.28x]` , Mann-Whitney p < 1e-16) than Tribal tracts (`tribal_pct ≥ 25%`).
- **Mechanism II — Sibling-Category Emergency Miscategorization & Route-Shield Class Inversion (Schema Bias):** (a) Across **354 census tracts housing 1,286,312 residents**, Overture reports `fire_department = 0` (100% deficit) *even though the physical fire station already exists inside Overture*, miscategorized under commercial B2B `fire_protection_service` , civic text names (`"Volunteer Fire Dept"`), or OSM `class='fire_station'` buildings without a Places pin (occurring at **9.01x** the urban rate in rural tracts, p < 1e-16). (b) Simultaneously, numbered State, County, BIA, and Farm-to-Market evacuation highways (`routes IS NOT NULL`) are down-tagged in OSM as `tertiary` , causing major-road filters (`motorway..secondary`) to sever **20.9%** of routed rural highway corridors vs. **4.0%** in urban tracts (**5.20x disparity**, 95% CI: `[4.68x, 5.77x]` , p < 1e-16).
- **Mechanism III — Wildfire-Corridor Semantic Blindness & Intra-County *Colonia* Masking (Intersectionality):** Top-quintile USFS Wildfire Hazard Potential tracts (`n = 1,959`) suffer significantly higher untyped building rates than lower-hazard tracts (**83.8% vs. 73.4%** untyped, 95% CI: `[+9.0pp, +11.8pp]` , p < 1e-16), peaking at **93.7% untyped footprints** inside active rural burn scars (`≥15%` area burned, `n = 274`). Meanwhile, inside metropolitan/border counties whose county-wide mean gap looks benign (`<0.072`), peri-urban high-SVI *colonia*-profile pockets (`SVI ≥ 0.85` , `SVI_housing_transport ≥ 0.80`) suffer **2.29x higher coverage gaps** (95% CI: `[2.04x, 2.54x]` , p < 1e-16) completely averaged away at county level.

2. Quantitative & Named-Tract Evidence Across All 5 Regions (25% Rubric Weight)

Study Region	Tracts	Population	Overture Bldgs	Raw Footprint Parity	MS-ML-Only Blobs	Typed Buildings	Height Present
Eastern OK (`eastern-ok`)	1,192	3,926,466	2,551,694	99.43% (`gap=0.0057`)	**69.4%**	**5.8%**	70.35%
Eastern WA (`eastern-wa`)	415	1,676,917	1,081,345	99.94% (`gap=0.0006`)	**38.1%**	**12.2%**	71.86%
Northern CA (`northern-ca`)	591	2,458,891	1,164,723	99.58% (`gap=0.0043`)	**50.8%**	**11.7%**	83.16%
South-Central TX (`south-central-tx`)	6,001	25,758,569	11,463,800	99.74% (`gap=0.0026`)	**43.3%**	**19.7%**	74.28%
Maricopa AZ (`maricopa-az`)	1,593	6,606,494	2,908,224	99.96% (`gap=0.0004`)	**13.0%**	**37.9%**	80.80%

Table 2A — Named Tracts Exhibiting the Machine-Footprint Semantic Mirage (97–100% Untyped Blobs Despite ~0 Building Gap)

Tract GEOID	Region	Jurisdiction / Tribal Area	Pop	Bldgs	Raw Bldg Gap	MS-Only	Untyped	SVI / Wildfire
`48201433505`	South-Central TX	Harris County, TX	2,898	189	`0.0063`	**100.0%**	**100.0%**	0.954 / 0% burn
`40049681600`	Eastern OK	Chickasaw OTSA	1,839	1,969	`0.0188`	**100.0%**	**100.0%**	0.425 / 0% burn
`06007002601`	Northern CA	Butte County, CA	2,474	2,021	`0.0065`	**100.0%**	**100.0%**	0.480 / 24% burn
`53065950200`	Eastern WA	Stevens County, WA	4,076	4,916	`0.0090`	**98.0%**	**99.4%**	0.487 / 28% burn
`04009961202`	Maricopa AZ	Graham County, AZ	4,102	1,923	`0.0089`	**95.8%**	**98.0%**	0.512 / 18% burn
`40099790600`	Eastern OK	Chickasaw OTSA	2,041	2,419	`0.0137`	**95.8%**	**100.0%**	0.360 / 10% burn
`53005010701`	Eastern WA	Benton County, WA	2,184	1,707	`0.0066`	**95.8%**	**99.5%**	0.373 / 28% burn

Table 2B — Named Tracts With "Ghost" Volunteer/Tribal Fire Stations & Severed Routed Evacuation Highways

Tract GEOID	Region	County / Tribal Area	Pop	Scored Fire POI	Hidden Overture VFD	Scored vs Excluded Routed Hwy	v8 Gap
`04021000700`	Maricopa AZ	Pinal County, AZ	3,114	`0` (**100% miss**)	**1** present in Overture!	0.0 km vs **10.5 km** (100% cut)	`0.2095`
`48373210205`	South-Central TX	Polk County, TX	2,513	`0` (**100% miss**)	**1** present in Overture!	0.1 km vs **11.8 km** (99% cut)	`0.2994`
`40051000904`	Eastern OK	Chickasaw OTSA	3,898	`0` (**100% miss**)	**1** present in Overture!	0.3 km vs **7.9 km** (96% cut)	`0.2577`
`40149965000`	Eastern OK	Cheyenne and Arapaho OTSA	1,989	`0` (**100% miss**)	**2** present in Overture!	100.8 km vs **597.6 km** (86% cut)	`0.2937`
`06093000800`	Northern CA	Quartz Valley Reservation	3,370	`0` (**100% miss**)	**2** present in Overture!	46.2 km vs **192.6 km** (81% cut)	`0.2061`
`40151954400`	Eastern OK	Woods County, OK	1,585	`0` (**100% miss**)	**2** present in Overture!	72.2 km vs **273.8 km** (79% cut)	`0.2473`

Table 2C — Intra-County High-SVI / *Colonia*-Profile Pockets Masked Inside Low-Gap Host Counties

Tract GEOID	Host County	Pop	SVI	County Mean Gap	Pocket Gap (Intra-County Ratio)	MS-Only / Untyped
`48355005900`	Nueces County, TX	4,091	0.934	`0.0337` (Benign)	**`0.1687` (5.00x)**	86.2% / 98.9%
`48453002434`	Travis County, TX	2,110	0.861	`0.0312` (Benign)	**`0.1477` (4.74x)**	26.7% / 99.9%
`04013723305`	Maricopa County, AZ	2,486	0.925	`0.0276` (Benign)	**`0.1121` (4.06x)**	14.3% / 32.4%
`04019940800`	Pima County, AZ	3,997	0.960	`0.0397` (Benign)	**`0.1309` (3.29x)**	44.4% / 99.3%
`48303010513`	Lubbock County, TX	2,309	0.914	`0.0469` (Benign)	**`0.1495` (3.19x)**	41.8% / 95.0%
`04013941000`	Maricopa County, AZ	3,540	0.940	`0.0276` (Benign)	**`0.0847` (3.07x)**	4.7% / 75.0%

3. Real-World Disaster Preparedness & Climate Resilience Impact (30% Rubric Weight)

- **Wildfire Structure Triage & Evacuation Bottlenecks (Northern CA, Eastern WA, Eastern OK):** During fast-moving Wildland-Urban Interface (WUI) fires (such as Butte/Shasta canyons in `northern-ca` or Okanogan/Yakama corridors in `eastern-wa`), CAL FIRE and Incident Command Systems allocate structure-protection engines using building occupancy class (schools, elder housing, multi-family apartments vs. agricultural barns/sheds) and route evacuees over state/county highways. When **94.2% of Eastern OK** and **88.3% of Northern CA** footprints lack `subtype` / `class` and **20.9%** of rural numbered highways are down-tagged out of primary/secondary routing tiers, automated evacuation routers underestimate egress capacity and misallocate structure triage.
- **Delayed Mutual-Aid Fire & EMS Dispatch (1,286,312 Residents Affected):** Automated CAD/GIS dispatchers and disaster-relief tools querying Overture `categories.primary = 'fire_department'` fail to see existing rural Volunteer Fire Departments miscategorized as `fire_protection_service` (Table 2B), falsely flagging 354 tracts as unserved and routing engines from distant municipal stations (+18–35 minutes response latency during cardiac, heat-stroke, or grass-fire emergencies).
- **Flash-Flood & Extreme-Heat Relief Allocation in Masked Peri-Urban *Colonias* (South-Central TX & Maricopa AZ):** Federal/state resilience grants screened at county granularity overlook unincorporated border and peri-urban pockets (Table 2C) whose severe civic-POI and road-classification deficits are diluted by affluent metropolitan cores in the same county.

4. 100% Deterministic Reproducibility & Open Data Documentation (20% Rubric Weight)

Every statistic, 2,000-iteration bootstrap 95% CI, Mann-Whitney *U* test, and named-tract table is reproduced deterministically (`SEED = 42`) in under 60 seconds from the official challenge package plus one public-domain Census FIPS county-name gazetteer (used solely for human-readable county labels, never in scored predictions):

```
git clone https://github.com/kevin9327/ZindiBiasBounty.git && cd ZindiBiasBounty
python extract_challenge_package_features.py   # Streams official 2026-09-25 Source Co-op Overture/Tract parquets via DuckDB
python pure_package_coverage_gap_estimator.py  # Generates 100% pure-package v7 & v8 CSVs (zero removed reference layers)
python reproduce_bias_discovery.py             # Recomputes all CIs, p-values & named tracts -> reproducible_bias_discovery_results.json
```

- **Primary Challenge Package (CC-BY-SA 4.0 / ODbL / CDLA-Permissive-2.0):** `s3://us-west-2.opendata.source.coop/humane-intelligence/bias-bounty-mapping-equity-challenge` (Overture Maps `2026-08-19.0`, Census ACS 5-Year Housing, 232-col Strata & USGS Wildfire/Heat/Drought tables; retrieved `2026-10-31`).
- **Supplemental Open Gazetteer (Public Domain, narrative county labels only):** US Census Bureau 2020 National County FIPS File, `https://www2.census.gov/geo/docs/reference/codes2020/national_county2020.txt` (retrieved `2026-10-31`).
